

COMPLIANCE ASSISTANT

EAS Management Software

- Automates Maintenance of EAS
- Automatically Downloads and Processes EAS Logs
- Automatically Generates EAS Compliance Reports
- Automatically Checks Logs for Errors and Missing Events
- Automatically E-mails Logs and Discrepancy Reports
- Manual Override at any Time

Automated EAS Compliance

The Compliance Assistant™ software simplifies EAS compliance by automating many of the common routines required by the FCC. Designed to maintain, analyze, and distribute EAS logs, discrepancy reports, and analysis reports from Trilithic's EASy series* EAS systems; this EAS management tool substantially decreases the time spent maintaining your emergency alert system and reduces the need to manually check the logs.

Once configured, Compliance Assistant performs all of these operations automatically on each EASy system. A scheduled daily or weekly report is generated and automatically e-mailed to let the users know the status of all EASy units in the field. This eliminates uncertainty of whether the logs were gathered, analyzed, and distributed, giving the user peace of mind that there are no willful infractions of FCC rules. One person can administer EAS compliance and manage overall system integrity for an entire group.

Powerful Reporting

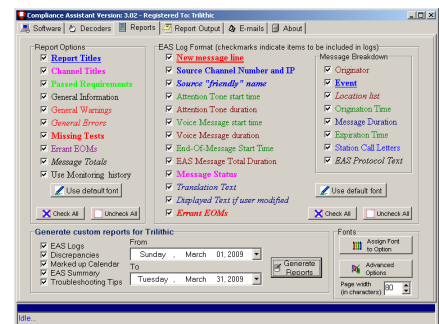

Compliance Assistance generates reports that make up the bulk of the FCC required administration documents

for EAS. It performs complete weekly and monthly analyses of logged events via Ethernet/IP or telephone for each EASy system on the IP network. It creates reports, highlighting regulatory failures (failure to comply with FCC regulations) and regulatory successes, as well as indicators of potential failures and discrepancies in each set of downloaded logs. Downloaded log files are automatically archived anywhere within your network storage capability.

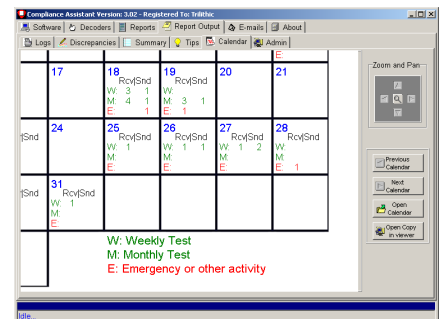

All reports may be produced in black-and-white or color, allowing for quick inspection of logs. Colors and fonts can be customized from their defaults. For example:

- Red = Non-compliance errors
- Green = Successful tests
- Amber = Areas of concern, etc.

In addition, a graphic monthly calendar view summarizes the reports in a quick overview of received and forwarded required weekly and monthly tests and other EAS messages such as child abduction emergencies or tornado warnings.

Custom report setup

Calendar view

* Compatible with all EASyCAST, EASyPLUS, EASyIPTV, and EASyIP Network Receiver systems from Trilithic.

Troubleshooting Tips and E-mail Notification

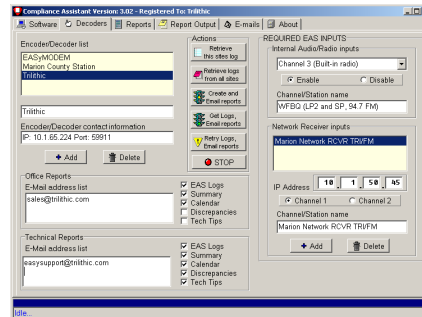

For ease of compliance this EAS management software also creates a troubleshooting guide if inbound EAS test message failures occur or other possible problems are discovered. The guide notes the issues and provides procedures specific to the problem. Once these reports are created, the software will automatically e-mail the troubleshooting guide or other user-defined information and reports to the appropriate people. For example, discrepancy reports and troubleshooting tips may be e-mailed to your head-end technician while your EAS logs are e-mailed to a corporate office. Troubleshooting tips provided are based upon knowledge obtained through years of customer support with EAS technology.

Multi-Site Licensing

Compliance Assistant is available in multiple station/system licenses, from three to 512 stations/systems. An unlimited license is also available. Contact your Trilithic sales representative for license pricing information.

"Decoders" setup

Requirements

- Compliance Assistant EAS management software requires Trilithic's optional EASyNET™ or EASyNIC™ hardware for each EASy series* unit (only required if more than one encoder/decoder is connected).
- A PC with internet access (Ethernet or dial-up modem) and a Windows XP® or later operating system is required in order to connect to multiple EASy series* encoder/decoders. An "always-on" internet connection is highly desirable for the computer running this software.

* Compatible with all EASyCAST, EASyPLUS, EASyIPTV, and EASyIP Network Receiver systems from Trilithic.
