

EASyCAP SOFTWARE

IPAWS CAP Support Software and Integrated Server

- Monitors Multiple CAP Sources such as TCP, DM-OPEN v1, or IPAWS-OPEN SOAP Interfaces
- Supports Multiple EASy Series EAS Systems Simultaneously
- Text to Speech Available
- Supports CAP Text and Audio on EASy Series EAS Systems
- Support for Governor Must Carry Alerts
- Complete Network-Based Solution, No Need for Audio Connections

Trilithic introduces the new EASyCAP™ Software and Integrated Server Package for supporting IPAWS CAP on EASyPLUS™, EASyCAST™, and EASyIPTV™ systems. EASyCAP Software is everything you need to be CAP-IPAWS compliant with your EASy Series Encoder/Decoders. With your choice of either the EASyCAP Software or the EASyCAP Integrated Server Package, you can receive CAP alerts from multiple sources such as TCP, DM-OPEN v1, or IPAWS-OPEN SOAP interfaces.

EASyCAP Software can support multiple EASy Series Encoder/Decoder systems. CAP alerts and audio are delivered to the EASyPLUS, EASyCAST, or EASyIPTV across a network connection (via TCP port), fully supporting CAP text and MP3 audio. CAP alerts are queued by the system until all EASy Series Encoder/Decoders can process the CAP alerts. Additional interfaces will become available for receiving CAP alerts as they are defined and required by FEMA, the FCC, individual states, or individual operators.

The EASyCAP Software and EASyCAP Integrated Server Package are the best and simplest solution to allow for full CAP support on all existing EASy Series Encoder/Decoders.

EASyCAP Software

The EASyCAP software is designed for users who already have a server available, and want the simplest solution available. The software can run on a PC or Server with Windows® XP, Windows® 7 (32-bit and 64-bit), Windows® Server 2003, and Windows Server® 2008 (32-bit and 64-bit) operating systems. The EASyCAP Software connects to the EASy Series Encoder/Decoders via Ethernet. Each Encoder/Decoder must have a Trilithic EASyNIC Ethernet card installed and be licensed to receive EASyCAP alerts.

EASyCAP Integrated Server Package

The EASyCAP Integrated Server Package is designed for users who need a server. The integrated package consists of a small 1U Linux-based server with EASyCAP Software pre-loaded. The same features are supported as those for EASyCAP Software for Windows. An intuitive Web Server is provided to allow for management and configuration of the system and software. (The Linux software is only offered with the integrated server, it is not sold separately). Each Encoder/Decoder must have a Trilithic EASyNIC Ethernet card installed and be licensed to receive EASyCAP alerts.

Additional packages are available for new customers needing both new EAS hardware and CAP software. Contact your sales representative for more information on a package to fit your exact requirements.

SYSTEM APPLICATION

SPECIFICATIONS

EASyCAP SOFTWARE & 1 LICENSE (P/N 2011607001)

Supported Operating Systems	Windows® XP, Windows® 7 (32-bit and 64-bit), Windows® Server 2003, and Windows® Server 2008 (32-bit and 64-bit)
Hardware	Must support the minimum requirements for the operating system 1 Ethernet port*

*An EASyCAP license for each EASy Series Encoder/Decoder is required to communicate with EASyCAP Software. Contact your sales representative for multiple licenses.

EASyCAP INTEGRATED SERVER PACKAGE & 1 LICENSE (P/N 2011607101)

EASyCAP Software	Linux based EASyCAP Software
Operating System	Ubuntu Linux version 10.04LTS
Dimensions	1.7" H x 17.2" W x 9.8" D
Communications	(2) Gigabit Ethernet ports, (1) RS-232 COM port, (2) USB ports
Warranty	3 year parts, 1 year labor (from Supermicro)

*An EASyCAP license for each EASy Series Encoder/Decoder is required to communicate with EASyCAP Software. Contact your sales representative for multiple licenses.
